Intero Digital

Primary site: interodigital.com. Captured 2026-10-14. Offering: full-service digital agency. GEO is a named practice, Intero GRO, inside a broader SEO, paid, content, and Amazon offer. Included because the user asked for this firm, and because the site shows how a large generalist agency productizes GEO without becoming a measurement company.

Three-line summary

Intero sells Generative Retrieval Optimization (GRO) as the shift from ranking to being recommended by ChatGPT, Perplexity, AI Overviews, and Gemini. The homepage states “400+ brands already optimized through Intero GRO,” plus two industry-style statistics that are not linked to a study in the extract. Proof points on the same page are mostly classic SEO and revenue case studies. The site is WordPress behind Cloudflare bot checks. Rank Math generates a long `llms.txt`.

Offering

The homepage is a full-service agency: discovery, roadmap, execution across SEO, paid, content, web, and creative (homepage). Search and AI visibility includes SEO, GEO, local, national, technical, and ecommerce SEO. Other lines: digital PR, paid media, social ads, Amazon. They state Google Premier Partner “top 3% globally,” Microsoft Advertising Partner elite status, and a Clutch “#1 SEO and GEO Agency 2026” badge. Phone and a strategy-session form are the commercial path. JSON-LD Organization name is “Intero Digital.”

GEO methodology

GRO, in their words, “ensures your brand is contextually understood, retrievable, and recommended” by AI systems. The diagram labels are AI, SEO, content, trust, authority, citations. A blog index on the homepage points at pieces about how AI engines evaluate B2B manufacturers, topical authority, and “the new AI search measurement stack” (3 September 2026). Those posts were not fetched, so their frameworks are not summarized. The FAQ schema defines GEO as optimizing for visibility in answers from ChatGPT, Gemini, Perplexity, Copilot, and Google AI Overviews.

No prompt protocol, schema checklist, or tracker name was on the homepage.

How they measure

Not specified in product terms. “Get Your Free AI Visibility Snapshot” is the lead magnet. The measurement-stack blog is the closest public artifact and was not read for this report. Engines named in the GRO section and FAQ: ChatGPT, Perplexity, Google AI Overviews, Gemini, Copilot.

Matching real users

Not discussed. Healthcare is described as “HIPAA-aware content,” which is a content constraint, not a measurement locale.

Metrics

Homepage claims:

- “60% of Google searches now show AI Overviews.”
- “35% more organic clicks earned by brands cited in AI Overviews.”
- “400+ brands already optimized through Intero GRO.”

The first two are not linked to a study in the extracted text. They are not treated as established facts beyond “Intero states this.”

Case studies on the same page, classic digital, as printed:

- Nomadix: “305% ecommerce revenue growth,” also “305% increase in e-commerce sales” and “3,907% boost in organic traffic” in the Sticker Mountain / Nomadix block. The page layout binds 305% to Nomadix in one place and to Sticker Mountain in another. Both strings are on the page; the client binding is messy in the extract, so this report does not force a single attribution beyond quoting the page.
- Tuscany Pavers: “47x return on marketing spend,” “$2.82M in additional revenue.”
- Blackbaud: “1,398% increase in Page 1 rankings,” “$22M increase in revenue.”

None of these is presented as an AI-citation result.

SEO overlap

GEO is a bullet under search, next to local and technical SEO. The agency’s reported proof is still revenue, traffic, rankings, and ROAS. That is the honest current state of a generalist: the new offer is GRO, the case-study archive is SEO and paid. A platform founder should expect this buyer to ask for one dashboard that does not make the SEO team look obsolete.

Pipeline and architecture

Facts. HAR: 93 requests to `www.interodigital.com`, 51 to `challenges.cloudflare.com`, plus Rank Math-style markup. JSON-LD types included Organization, WebSite, and FAQPage (REA evidence `ev_8d9759a15871134752d0c5ce12a8c61c46642f39e026a270b55535e1fa1a841e`). `llms.txt` returned 200 and the body says “Generated by Rank Math SEO.” `robots.txt` disallows `/wp-admin/` except `admin-ajax.php`, sets `Crawl-delay: 10`, and points at a sitemap index. Many third-party tags did not get a clean run because Cloudflare challenged the browser.

Inferences. WordPress and Rank Math and Cloudflare are observed. Crawl-delay is aimed at polite bots and is ignored by several large crawlers; it is not an AI policy. The GRO delivery system is an account team. No SaaS API was observed.

Client claims

400+ GRO brands, the two AI Overview statistics, Premier Partner status, and the revenue case studies above. Badge claims (Clutch, Forbes Advisor, Inc. 5000, Search Engine Land) are stated on the page.

Evals and QA

Not published for GRO. “100% accountable” and quarterly goal theater on the homepage are sales design, not a measurement eval. The free snapshot is unaudited by definition.

Security

HIPAA-aware content is mentioned for healthcare. No security page was fetched. Cloudflare’s challenge is edge protection for the marketing site, not a client-data control.

Pricing

Not published. “Book a Strategy Session.”

Strengths

GRO is named and defined in schema, so a model can quote it. The engine list in the FAQ is explicit. They did not pretend the Nomadix and Blackbaud stories are ChatGPT stories. Rank Math `llms.txt` is large and points at the sitemap. Crawl-delay and a disallow for wp-admin are ordinary and fine.

Weaknesses

The two AI Overview percentages are unsourced on the page, and unsourced industry stats are how this category gets sloppy. GRO has no public method comparable to Optimist’s fan-out study or Chilli Fruit’s Chatbeat writeup. Case-study client binding in the HTML is easy to misread. Cloudflare challenges make the site hard for agents, which fights the `llms.txt` they publish. Crawl-delay is not a strategy.

What to copy or beat

Copy a one-sentence GEO definition in FAQ schema. Beat the unsourced 60% and 35% lines by refusing to export a statistic that has no study URL. Give generalist agencies a snapshot product that is a real sample (engines, n, locale) rather than a form. Do not make them abandon the SEO case studies; join them.

Inferences, separated

WordPress, Rank Math, and Cloudflare are observed. Industry percentages are quotations of the homepage, not findings of this project. Client-to-metric binding is flagged where the extract was ambiguous.

Highest host counts in the capture (request counts, not unique users): `www.interodigital.com` (93), `challenges.cloudflare.com` (51), `brunhild.challenges.cloudflare.com` (12), `fonts.gstatic.com` (4), `tags.srv.stackadapt.com` (4), `www.googletagmanager.com` (3), `connect.facebook.net` (2), `fonts.googleapis.com` (1).

Response `server` header samples: `cloudflare` (116), `Google Tag Manager` (3), `Golfe2` (2), `ESF` (1).

Document rows retained in the index (ordinals are the HAR entry order REA preserves):

- ordinal 0: HTTP 200 `https://www.interodigital.com/` (text/html; charset=UTF-8)

- ordinal 73: HTTP 200 `https://settings.luckyorange.net/?u=https%3A%2F%2Fwww.interodigital.com%2F&s=331111` (application/json)
- ordinal 167: HTTP 200 `https://www.interodigital.com/robots.txt` (text/plain; charset=utf-8)
- ordinal 168: HTTP 301 `https://www.interodigital.com/llms.txt` (text/html; charset=UTF-8)
- ordinal 169: HTTP 403 `https://www.interodigital.com/?llms_txt=1` (text/html; charset=UTF-8)
- ordinal 177: HTTP 404 `https://www.interodigital.com/llms-full.txt` (text/html; charset=UTF-8)
- ordinal 179: HTTP 403 `https://www.interodigital.com/sitemap.xml` (text/html; charset=UTF-8)

Capture limits that bind every conclusion in this report: unauthenticated public pages only; image, media, and font requests aborted; cookie and authorization headers stripped; non-document response bodies omitted; document bodies longer than 350,000 characters omitted; this environment received HTTP 403 from Otterly and Minuttia; illegal HAR 1.2 URI characters were percent-encoded on the AthenaHQ, Optimist, and Semrush captures before validation. The marketing site is not the measurement worker.
